Office Action Summary

Application No.

10/731,774

Applicant(s)

WRIGHT ET AL.

Examiner

Stephen J. Castellano

Art Unit

3727

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-43 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-43 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 08 December 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. ____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 12/8/03.
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. ____.
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: ____.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-9 and 12-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Elliott et al. ('638)(Elliott) in view of Toth et al. (Toth).

Elliott discloses a vessel, the vessel includes a reinforcing structure comprising a plurality of gore pieces (strip 26), each gore piece is a sheet of fiber reinforced resin matrix material (a composite material) and includes a first surface (inside surface), a second opposing surface (outside surface), each gore piece has the geometric relationship claimed with first width, second lesser width, first longitudinal location at a greater radial distance and a second longitudinal location at a lesser radial distance. Elliott discloses the invention except for the vessel body and each gore piece being disposed over and conforming to a portion of the vessel body and the fibers being parallel to the first surface. Toth teaches a vessel with a vessel body (liner 12) with a reinforcing structure (reinforcement 14) disposed over and conforming to the entire surface of the vessel body. It would have been obvious to add an inner liner layer to provide a layer more compatible with the contents of the vessel. Toth also teaches fibers oriented parallel to the inner (first) surface of the reinforcement 14. It would have been obvious to reorient the fibers of Elliott from radial to a direction parallel to the inside surface of the reinforcement to better reduce tensile and hoop stress within the reinforcement.

Re claims 5-7, 9, 20-23, 26, 27, 29 and 9, the weave of a separate woven square mats of a first layer are taught to be oriented parallel and perpendicular to the vessel axis with a square mat of a second layer placed over the first layer where the second layer has a weave oriented at 45 degrees to the vessel axis as stated in col. 2, line 67 to col. 3, line 5.

Re claims 14 and 15, no offset or a zero degree offset is between +15 degrees to -15 degrees and is about 20 degrees or less.

Re claim 25, the method of making a reinforcing structure for a vessel is disclosed by the Elliott in view of Toth rejection.

Claims 10, 11 and 32-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Elliott in view of Toth and Sneddon.

The combination of Elliott and Toth is as previously discussed above. The combination of Elliott and Toth discloses the invention except for the overlapping of a portion of at least one of the gore pieces with a portion of at least one other of the plurality of gore pieces. Sneddon teaches a reinforcement structure (outer jacket 16) constructed by superimposing and overlapping layers of impregnated filamentary material as best shown in Fig. 2 and 3. Claims 41-48 and 56 are rejected under 35 U.S.C. 103(a) as being unpatentable over Elliott in view of Toth and Sneddon.

The combination of Elliott and Toth is as previously discussed above. The combination of Elliott and Toth discloses the invention except for the overlapping of a portion of at least one of the gore pieces with a portion of at least one other of the plurality of gore pieces. Sneddon teaches a reinforcement structure (outer jacket 16) constructed by superimposing and overlapping layers of impregnated filamentary material as best shown in Fig. 2 and 3. It would

Art Unit: 3727

have been obvious to overlap the gore pieces over one another rather than to abut the gore pieces to insure that an inconsistency at the edge of a gore piece doesn't result in an opening in the reinforcement structure which can leave a portion of the vessel body unprotected and unreinforced and could also result in stress concentrations leading to reinforcement structure stress cracks and ultimately catastrophic pressure vessel failure.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 3727

Claims 1-9, 12-40 and 43 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-10 of U.S. Patent No. 6,719,165 to Wright et al. (Wright). Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to keep the overlapping while removing the limitation that each gore piece of a second layer overlaps at least two gore pieces of a first layer. The claims of Wright ('165) effectively anticipate the above mentioned claims and/or it would have been obvious to remove the second layer to first layer relationship as the only difference.

Claims 10, 11, 41 and 42 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-10 of U.S. Patent No. 6,719,165 to Wright et al. (Wright) in view of Sneddon. Wright discloses the invention except for the overlapping of adjacent gore pieces in the same layer. Sneddon teaches the overlap of adjacent portions. It would have been obvious to overlap the gore pieces over one another rather than to abut the gore pieces to insure that an inconsistency at the edge of a gore piece doesn't result in an opening in the reinforcement structure which can leave a portion of the vessel body unprotected and unreinforced and could also result in stress concentrations leading to reinforcement structure stress cracks and ultimately catastrophic pressure vessel failure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen J. Castellano whose telephone number is 571-272-4535. The examiner can normally be reached on increased flexibility plan (IFP).
